

Dry Unit

MODEL : TS-5000

Space-saving floor type aspirator

Features of Space-saving floor type aspirator with casters

- A mobile aspirator with casters designed primarily for use in hospital wards.
By reducing the space of the main body as much as possible, it is easier to handle between ward beds where space is limited.
A handle for movement is installed at the rear of the main body, so safe and easy movement is possible.
The casters for movement use a 75φ diagonal stopper. It has excellent stability when moving and using.
- By switching to the foot switch mode, suction operation can be performed by stepping on it, which is especially convenient when both hands are occupied. Also, since the foot switch is a connector type, it can be installed as needed.
- The iron body with baking powder coated, making it hard to break and durable.
- A large cooling fan is equipped with the main body, which enables continuous using.

Triple safety system

- Float stopper in bottle, drain trap and suction filter are equipped with main body, protects equipment from inhalation of filth.
